

POULTRY

BIOSECURITY

IS EVERYONE'S BUSINESS

**Don't take
new chickens
straight to your
flock...**

**...they might
bring disease**

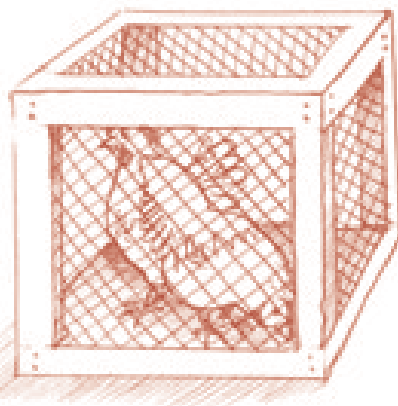

**...which will
make your
chickens sick**

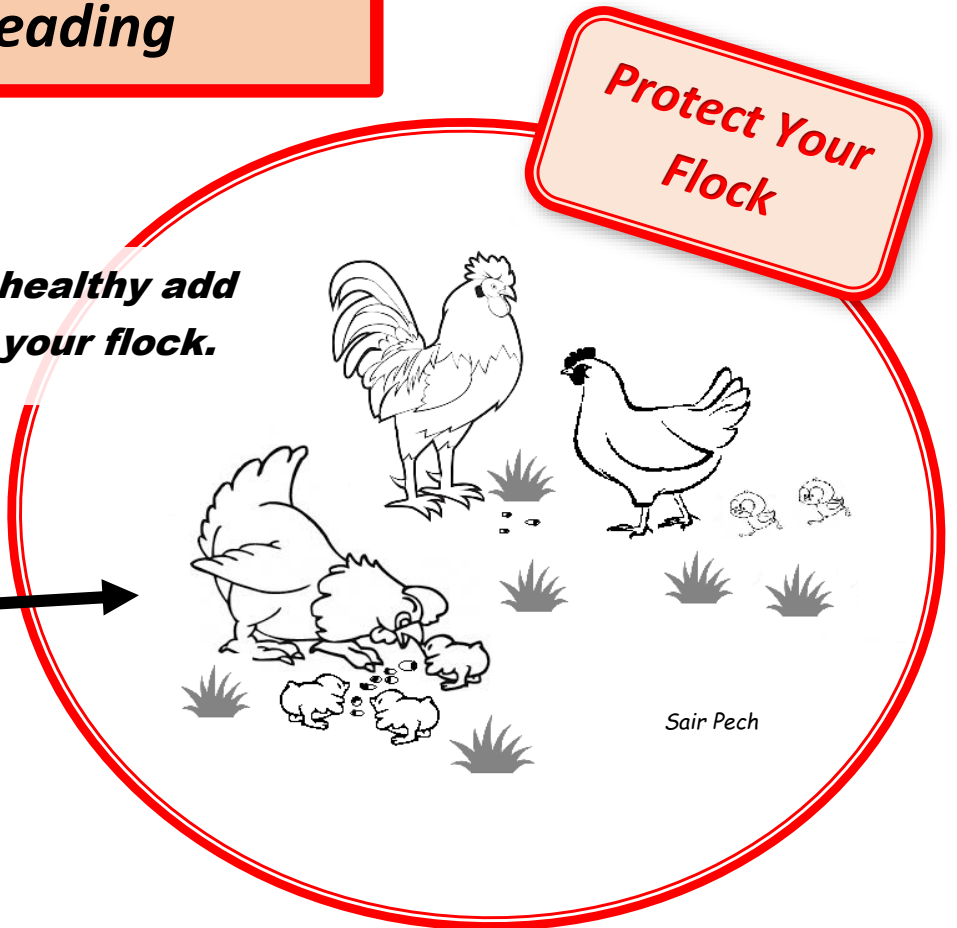

Biosecurity...

**...the things we do at our farm to prevent
disease from entering or spreading**

**Do quarantine them for at least two
weeks in a separate coop...**

**...if still healthy add
them to your flock.**
